

IPS Video Solutions in VipNet Campus

For the security of its locations in Zagreb, Split, Rijeka, Osijek and Zadar, the Croatian telecommunication provider VipNet counts on IPS VideoManager and IPS VideoAnalytics. The sites have been equipped with about 200 cameras. These are displayed, recorded and controlled by several comprehensive IPS VideoManager VMS. In addition, the sites have been provided with IPS Motion Detection for automatic recording control and IPS Outdoor Detection for reliable perimeter surveillance. This enables the real-time detection of unauthorised access to the premises, the efficient retrieval of recorded events and the significant reduction in bandwidth and storage needs.

IPS Intelligent Video Analytics

IPS Intelligent Video Analytics, founded in 1965, is a German manufacturer of sophisticated video products. Since the acquisition by Securiton GmbH in 2006, IPS has been managed as an independent business unit. In recent years, IPS has been developing its latest generation of IP-based software solutions for video analytics and management. The current IPS products are successfully installed in numerous applications in Germany and in the rest of Europe by Securiton GmbH and selected partners.
